

TradeTheTrend

The Friendly Guide to the EdgewithAI NSE Dashboard

A picture book for learning how to read prices, sectors and rules, one small step at a time.

Information only. This book and the dashboard do not give investment advice.

Hello, Reader!

Edgie the Owl says: Hi! I am Edgie. I will help you learn the dashboard. We will go slowly. Every chapter has pictures, new words, and a short quiz.

How this book works

Each chapter has colored boxes. Here is what they mean:

Words to Know
New words and what they mean.

Let's Learn
The big idea, told in a simple way.

Try It!
Steps you can do on the dashboard.

Think About It
A question to make you wonder.

Safety First
Things to be careful about.

Check Your Understanding
A few questions. The answers are in the back of the book.

Please read this first
The dashboard looks at **past prices** and follows **simple rules**. It can be wrong. It does **not** tell you what to buy. It is a tool for looking and learning. Only a person can decide, and it is wise to talk with a **SEBI-registered adviser**. Never use money you cannot afford to lose.

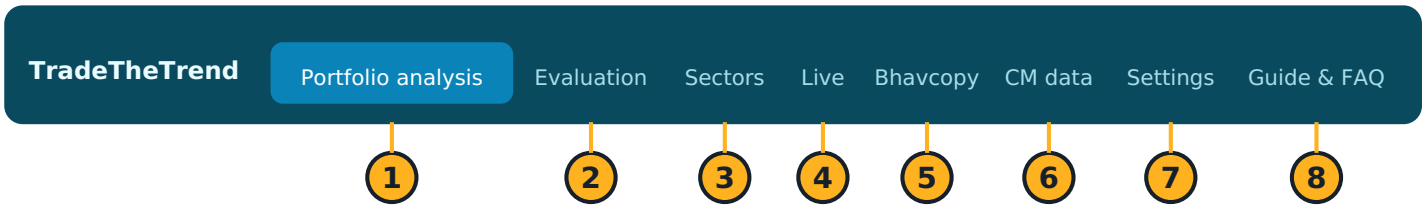

What is inside

Chapter 1	Meet the Dashboard
Chapter 2	Words About Prices
Chapter 3	Words About Trades
Chapter 4	Your First Analysis
Chapter 5	Two Sets of Rules
Chapter 6	Money Math
Chapter 7	Suggest Stocks
Chapter 8	The Report Card
Chapter 9	The Time Machine
Chapter 10	Watching Live

Chapter 15	Settings and Your Own Lists
Chapter 16	When Things Go Wrong
Chapter 17	Safety Rules for Smart Learners
Extra	Glossary, and the Answer Key

CHAPTER 1

Meet the Dashboard

A **dashboard** is one screen that shows many numbers and charts together. Imagine a school with many rooms. One room has the library. One has the science lab. Each room has a job. The dashboard is like that school. Each **tab** at the top is a different room. When you sign in you land on the **Home** page: nine big cards on an aqua blue background. Click a card to walk into that room. Every other page has a blue **← Home** button at the top to walk back out.

Each numbered tab is a different room in the dashboard.

Figure 1.1: The tabs at the top of the dashboard.

#	Tab	What you do there
1	Portfolio analysis	Type in stocks and see charts, rules and numbers for each one.
2	Evaluation	Your report card: how your picks did later. Also the Backtest.
3	Sectors	See which parts of the market are strong, and send stocks to Portfolio analysis.
4	Live	Watch prices move, and see the biggest gainers and losers.
5, 6	Bhavcopy, CM data	The two data servers. Grown-up helpers use these to look things up.
7	Settings	Your key for the chat assistant, your money rules, and connection tests.
8	Guide & FAQ	Quick answers to questions, and this picture book as a PDF.

Try It! Open the dashboard

1. Open **momentum-trend.onrender.com** in your web browser (or click the TradeTheTrend button on the EdgewithAI website).
2. Sign in with your Google account. Access is by invitation, so your email must be on the list.
3. Look at the top left. You may see a small build stamp. That tells you which version you are using.

Try It! Filter a table

Almost every table has a small **filter** box under each column name.

1. Type words to keep only matching rows, like **tech** or **LONG**.
2. For numbers, use signs: **>5** means bigger than 5, **<=-2** means -2 or less, **3..8** means from 3 to 8.
3. Put a comma between choices: **TCS, INFY**. Start with **!** to leave something out.
4. Click a column name to sort. Click **Clear filters** to start over.

Check Your Understanding

1. What is a tab?
2. Which tab would you open to see sectors?
3. Where is the chat Assistant?
4. How would you show only numbers bigger than 5 in a column?

CHAPTER 2

Words About Prices

Before we use the dashboard, let us learn a few words. They are small, but they will help us all through the book.

Words to Know

- **Stock**: a tiny piece of a company that people can buy and sell.
- **NSE**: the National Stock Exchange of India, a big marketplace for stocks.
- **Close**: the last price of a stock at the end of a day.
- **LTP**: Last Traded Price. The newest price someone paid.
- **Previous close**: yesterday's closing price.

Let's Learn: What does 1D mean?

1D means one day. On the Sectors tab it is the newest traded price (LTP) compared with **yesterday's close**. If the market is closed, it uses the last trade. Think of it like comparing your height this morning with your height yesterday.

Floors and ceilings

A ball bouncing in a room goes up and comes down. Stock prices can bounce too. Sometimes they keep stopping near the same low price. That is called **support**, like a floor. Sometimes they keep stopping near the same high price. That is called **resistance**, like a ceiling.

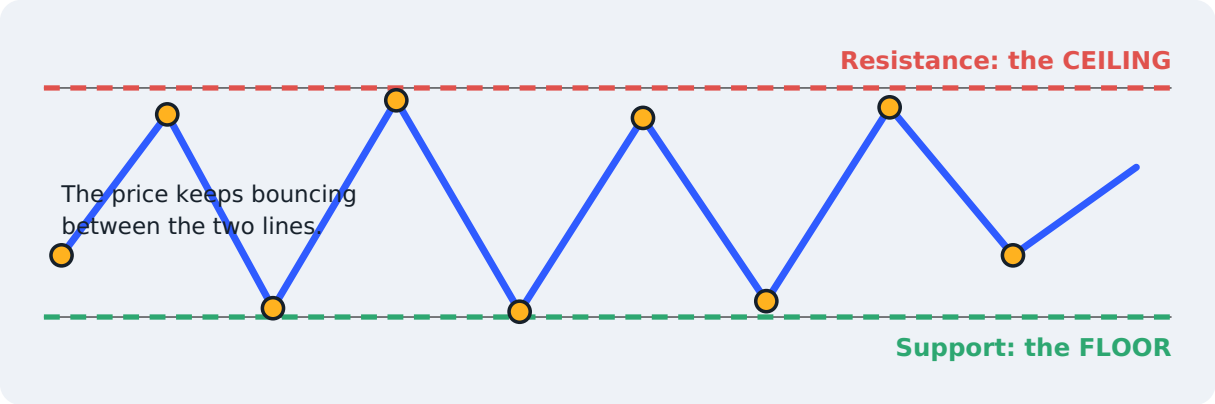

Figure 2.1: Price bouncing between a floor (support) and a ceiling (resistance).

The walking average

Prices jump around every day. An **average** smooths the jumps, like walking instead of running. The **20-day average** is the average of the last 20 days. The **50-day average** looks back 50 days. When the short walk is above the long walk, prices have been climbing lately.

Did you know?

The dashboard draws these averages on each chart as colored lines called SMA20 and SMA50. SMA means Simple Moving Average.

Check Your Understanding

1. What is the LTP?
2. Is support a floor or a ceiling?
3. What does 1D compare?

CHAPTER 3

Words About Trades

A **trade** is when someone buys a stock hoping to sell it later for more. The dashboard shows three special prices for every **setup**.

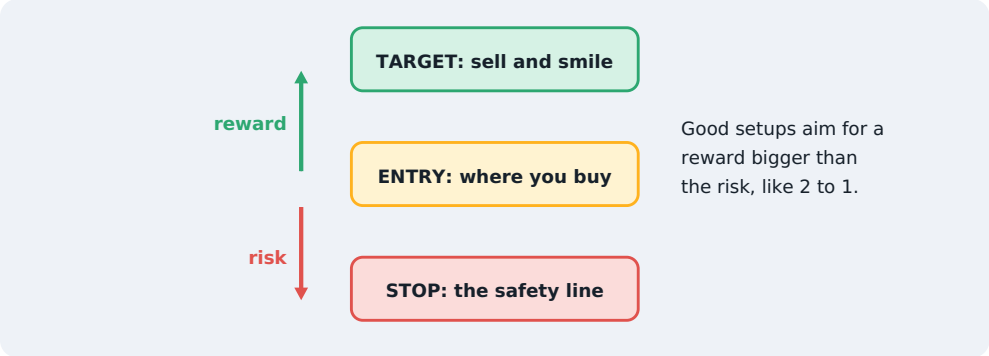

Figure 3.1: Entry, stop and target.

Words to Know

- **Entry**: the price to buy at.
- **Stop loss**: a safety line below the entry. If the price falls to it, the setup is wrong. You get out to keep a loss small.
- **Target**: the goal price above the entry, where you aim to sell.
- **Risk**: how much you could lose, from entry down to the stop.
- **Reward**: how much you could gain, from entry up to the target.
- **Reward : risk**: reward divided by risk. 2 means the reward is twice the risk.

Let's Learn: The check-back date

The dashboard may suggest a **holding period**, like 'about 8 trading days'. It is not a promise. It is a day to **check back**. The trade can end sooner at the stop or the target.

Safety First

A setup is made from **last night's close**. The price may have moved since. The dashboard checks today's price for you and tells you if the setup no longer applies.

Think About It

If the reward is smaller than the risk, is it a good deal? Why or why not?

Check Your Understanding

1. What is a stop loss for?
2. If reward : risk is 2, what does that mean?
3. Is the holding period a promise?

CHAPTER 4

Your First Analysis

Now we meet the first room: **Portfolio analysis**. Here you type in stocks and the dashboard studies each one.

Try It! Analyse a stock

1. Open the **Portfolio analysis** tab.
2. In the **Stocks** box on the left, type a name or symbol, like **TCS**. A green check shows the dashboard found it.
3. Look at **Capital**. Own capital is the money you pretend to use.
4. Click **Run analysis**.
5. Scroll down to read the stock card.

Edgie the Owl says: Tick the little **Eval** box next to a stock to save it on your Evaluation list. We will use that list in Chapter 8.

Figure 4.1: A real picture of the dashboard. A chart with dashed support and resistance lines, a money summary above it, and the Suggestions box on the left.

Reading a stock card

1. **The chart.** The blue line is the close. Green and yellow lines are the 20- and 50-day averages. Dashed lines are support and resistance.
2. **The setup boxes.** A **LONG SETUP** box shows entry, stop, target and reward : risk. **NO TRADE** means the rules do not see a good setup.
3. **The 52-week range.** The highest and lowest price in a year. A dot shows where the price is now.
4. **The holding period.** The check-back day, and the reasons for it.

How fresh is the price?

Every price has a small badge that tells you where it came from.

Figure 4.2: The three price badges.

Did you know?

'No trade' is a normal answer. The rules are picky on purpose. Most days, most stocks get 'no trade'.

Check Your Understanding

1. Which button starts the study of your stocks?
2. What does a 'live' badge mean?
3. Is 'no trade' a mistake?

CHAPTER 5

Two Sets of Rules

The dashboard has two rule books. Each one is like a checklist. A stock must pass enough checks to get a **LONG SETUP**. 'Long' just means a plan to buy and hope the price goes up.

Rule book 1: Trend and momentum

A setup needs at least **3 of these 4** checks, and the first one must pass:

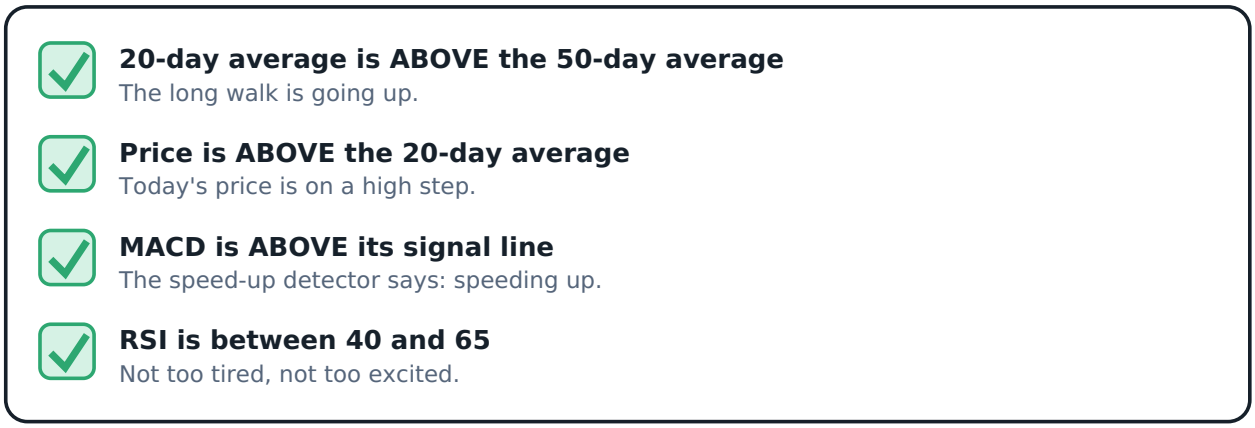

Figure 5.1: The four trend checks.

Words to Know

- **RSI**: a 0-to-100 meter. Very high means the price rose very fast and may be tired.
- **MACD**: a tool that senses whether prices are speeding up.

If RSI is over 70, the answer is always 'no trade'. The stop sits under recent lows. The target is two times as far up as the stop is down.

Rule book 2: Support and resistance

This one looks for floors and ceilings, called **zones**. A zone must have been touched at least twice. Then it looks for two kinds of moves:

- **Support bounce:** the price dips down to a floor, then climbs back and closes higher. Like a ball bouncing off the ground.
- **Resistance breakout:** the price pushes up through a ceiling and closes above it. Like popping through the roof.

The stop goes just under the zone. The target sits just under the next ceiling.

Think About It

The two rule books look at different things. What might it mean when **both** say LONG for the same stock?

Let's Learn

The two boxes sit side by side on each stock card. A small note tells you if they agree. They each have their own entry, stop and target.

Check Your Understanding

1. How many of the four trend checks must pass?
2. What is a support bounce?
3. What is a resistance breakout?

CHAPTER 6

Money Math

On the left side of Portfolio analysis is a part called **Capital**. It helps you plan how many shares you could buy.

Words to Know

- **Capital**: the money you have to use.
- **Split**: how the money is shared among your stocks.
- **Quantity**: how many whole shares fit in each share of money.
- **Net P/L**: profit or loss after all the costs are taken away.
- **Break-even**: the price where you neither win nor lose after costs.

Sharing the money

- **Equal split:** every stock gets the same amount.
- **Suggested by the app:** only stocks with a LONG setup get money, and calmer stocks get a bit more. There is a limit per stock.

Another choice, **Sizing and funding use**, tells the dashboard whether to size things using the trend setup or the support and resistance setup.

Borrowing, called MTF

Some brokers lend part of the money. This is called **MTF**. It can make wins bigger, but losses bigger too, and you pay **interest** for every day.

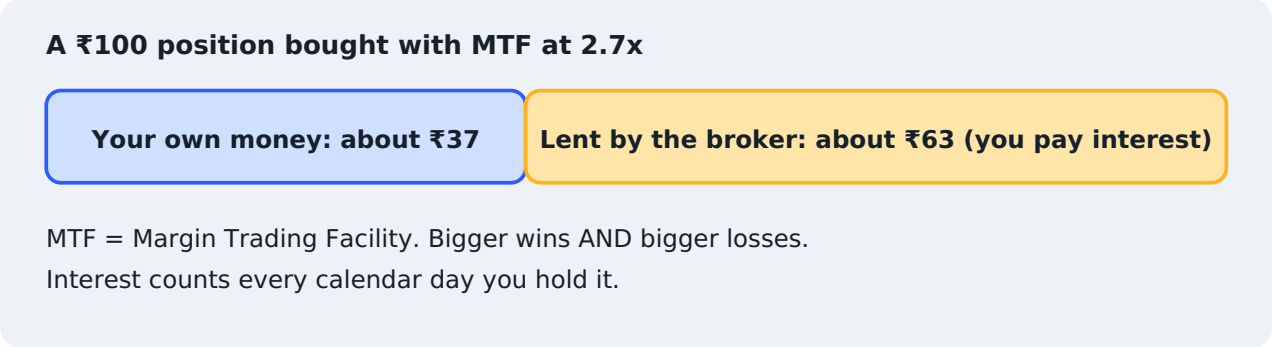

Figure 6.1: Part your money, part borrowed.

Safety First

The charges and interest in the dashboard come from rules you set in Settings. Some values start as placeholders. Put in your own broker's numbers, and remember the answer is an **estimate**, not a bill.

Check Your Understanding

1. What does 'equal split' do?
2. What is MTF?
3. Is net P/L the same as the bill from the broker?

CHAPTER 7

Suggest Stocks

What if you do not know which stocks to look at? The **Suggestions** box can scan the 30 most-traded stocks for you.

Try It! Get suggestions

1. In the left sidebar, find **Suggestions**.
2. Type an **extra budget**, like 100000.
3. Choose a **Rule set**: Trend and momentum, Support and resistance, or Either.
4. Click **Suggest stocks** and wait about a minute.

A table appears with up to five stocks. Each shows a badge for the rule set that found it, its score, entry, stop, target and how many shares fit. Stocks already past their stop or target today are skipped.

Let's Learn

Picks are also saved to your Evaluation list as **System** picks, so you can check later how they did.

Safety First

Suggestions are a mechanical screen. They are not advice. Many days the list is short, or empty.

Check Your Understanding

1. How many stocks does the scan look through?
2. What happens to the suggestions you get?

CHAPTER 8

The Report Card

At school, a report card shows how you did. The **Evaluation** tab is a report card for your stock ideas.

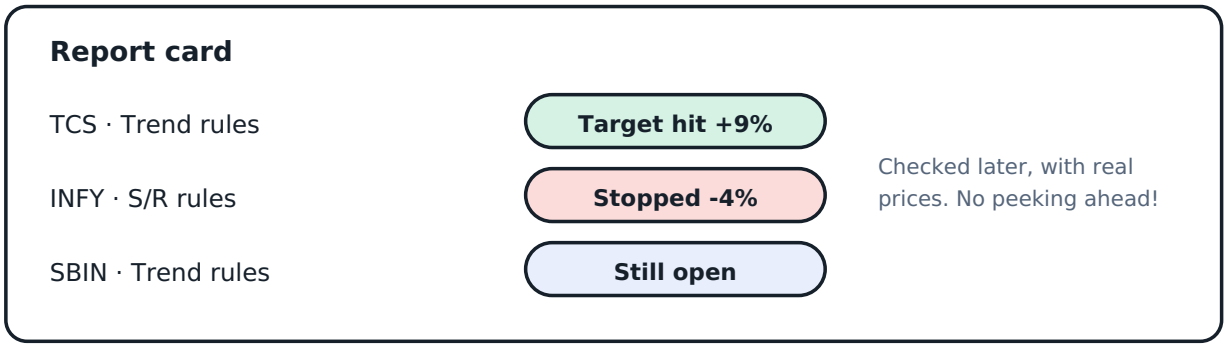

Figure 8.1: Each pick gets a result: target hit, stopped, or still open.

Try It! Check your report card

1. Open the **Evaluation** tab.
2. Click **Refresh outcomes**. The dashboard looks at real prices since each pick was added.
3. Use the chips **All**, **You** and **System** to filter.
4. Tick **Took** if you really took a trade.

The table shows **You** for stocks you ticked and **System** for stocks the Suggest button found. The **Rule set** column says which rules produced each one. The top table compares Trend rules and S/R rules.

Let's Learn: Your list lives on YOUR computer

The server does not keep this list. Your browser keeps it. A browser can clear its storage, so keep a copy. Use **Create a file** or **Download a copy** on the left, and **Open my file** to load it again.

Think About It

If only 5 picks have finished, can we say the rules work? Why not?

Check Your Understanding

1. Where is your Evaluation list kept?
2. What does Refresh outcomes do?
3. Why save a file copy?

CHAPTER 9

The Time Machine

A **backtest** is like a time machine. It goes back to old prices and asks, 'What would the rules have done?'

Figure 9.1: Replaying the rules on old prices.

Try It! Run a backtest

1. In the Evaluation tab, tick stocks in the list.
2. Choose the **Rule set**, the history length, the longest holding time and the cost.
3. Click **Backtest selected**.
4. Open a stock to see its chart and every trade.

You will see the number of trades, the win rate, the average result, and how the rules did compared with just **buying and holding**.

Safety First: Backtests can fool you

- **Few trades** (under 30) prove very little.
- Stocks that look strong **today** flatter the test. That is called hindsight.
- The past does not promise the future.

Words to Know

- **Win rate**: how often a trade ended in a gain.
- **Drawdown**: the biggest fall from a high point.
- **Buy and hold**: buying once and never selling during the test.

Check Your Understanding

1. What does a backtest do?
2. Why do few trades prove little?

CHAPTER 10

Watching Live

The **Live** tab is like a window onto the market.

Try It! Watch some stocks

1. Open the **Live** tab.
2. Type up to 20 symbols, like TCS, INFY, RELIANCE. Or use the buttons to fill them from your portfolio or Evaluation list.
3. Choose how often to update. The data refreshes about once a minute, so faster is not better.
4. Click **Refresh now**.

Turn on **Top movers** to see the biggest **gainers** (went up most) and **losers** (went down most) today. Click a stock name to add it to your watch list.

Did you know?

If the market is closed, you will see the last trade, not a moving price. The page tells you the market state and how old each quote is.

Safety First

Big moves can come from news, thin trading, or company actions like splits. A big mover is not always a good stock.

Check Your Understanding

1. What is a gainer?
2. Why is updating faster than once a minute not useful?

CHAPTER 11

Sectors: The Market's Neighborhoods

A town has neighborhoods. A stock market has **sectors**. Stocks in the same sector are in the same kind of business, like all the banks, or all the car makers. When many stocks in a sector rise together, that sector has **momentum**.

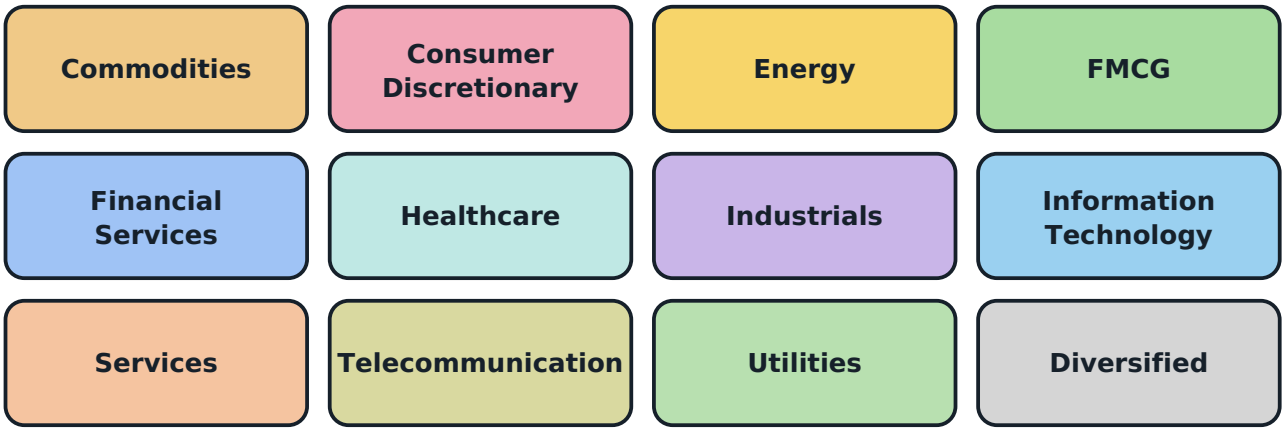

Figure 11.1: The twelve sectors in the dashboard.

Each sector is split into smaller **industry groups**. For example, Financial Services has Banks, Financial Institutions, Capital Markets and Insurance.

Words to Know

- **Sector**: a group of companies in the same big kind of business.
- **Industry group**: a smaller group inside a sector.
- **Momentum**: how strongly prices have been moving up.
- **Large, mid and small cap**: big, medium and small companies.
- **Breadth**: how many stocks in the sector are doing well, not just one or two.

Try It! Load a sector

1. Open the **Sectors** tab.
2. Under **Load**, pick one sector. Loading all of them takes a long time the first time.
3. Choose **Stocks**: all, large caps only, or mid and small caps only.
4. Pick the **Chart**: daily, weekly or monthly.
5. Click **Load sectors** and watch the table fill in.

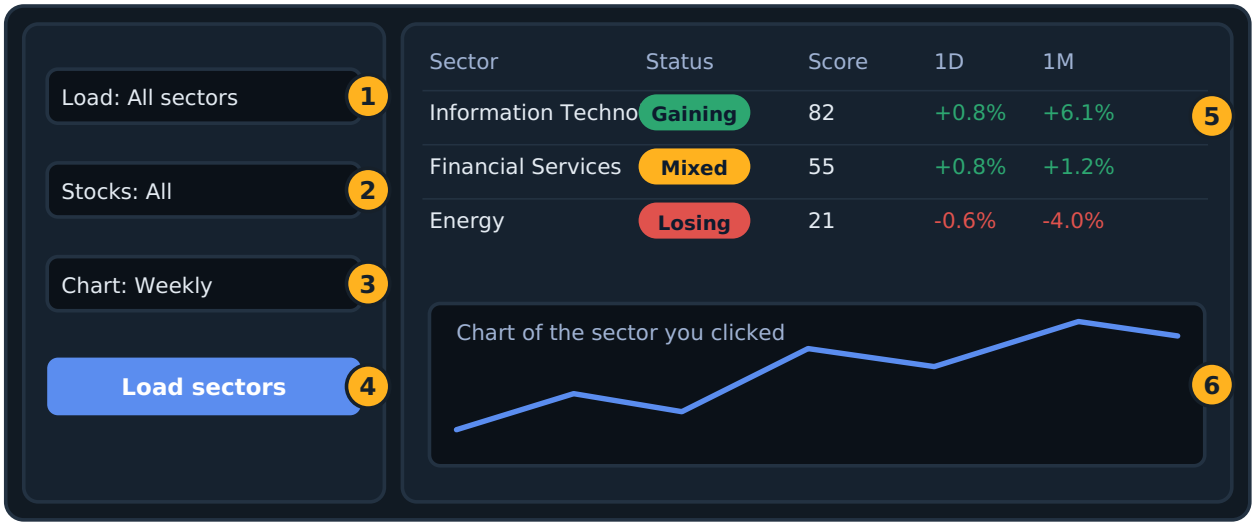

Figure 11.2: A sketch of the Sectors tab. 1: which sector to load. 2: which size of company. 3: chart timeframe. 4: the load button. 5: the ranking. 6: the chart.

Reading the ranking

- **Status:** **Gaining** (a month and a week up, above its 20-day average, and half its stocks above their 50-day), **Losing**, or **Mixed**.
- **Score:** ranks the sectors against each other. A month counts 40%, three months 30%, a week 20% and breadth 10%.
- **1D (LTP):** today's change using the newest traded price.

Click a sector to see its **industry groups**, a chart, and its stocks. Click an industry group to focus on it. **Tick the stocks you want** and press the button to send only those to Portfolio analysis.

Safety First

A sector here is a **homemade index**: the average of a short list of stocks. It is not an official NSE index, and the lists may be missing stocks. Look at the line called **Not included** under the chart for stocks that could not load.

Check Your Understanding

1. What is a sector?
2. What does 'Gaining' need?
3. How do you send only some stocks to Portfolio analysis?

CHAPTER 12

The Race: Sector Rotation

Money does not sit still. It moves from one sector to another, like runners taking turns in front. This is called **rotation**. Spotting a runner who is **starting to catch up** can show an early move.

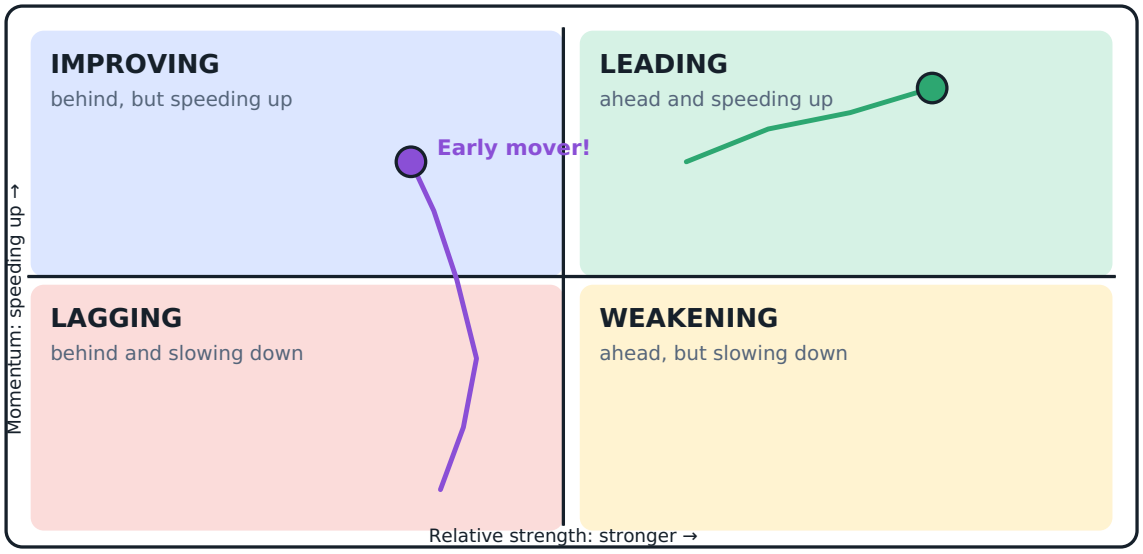

Figure 12.1: The four quadrants. The purple trail is an early mover.

Quadrant	In a race, it is like...
Leading	The runner in front who is still speeding up.
Weakening	Still in front, but getting tired.
Lagging	Behind and slowing down.
Improving	Still behind, but speeding up. Watch this one!

Each sector is measured against the **average of the sectors you loaded**. Across is **RS-Ratio** (how strong compared with others). Up is **RS-Momentum** (is that getting better?). The tail shows where it came from.

Try It! Find early movers

1. Load at least **three** sectors. Load more for a better picture.
2. Scroll to **Sector rotation** under the ranking.
3. Look for names with an **early** badge. They are listed first.
4. Change **Rotation view** to see the industry groups of the selected sector.

Think About It

The Daily chart reacts fast but jumps around. The Monthly chart is calm but slow. When might you want each one?

Safety First

This is a simple rotation picture, not the official one. Rotations often fail. Use it to decide **where to look**, then check the stocks themselves.

Check Your Understanding

1. What is an 'Improving' sector?
2. How many sectors must be loaded to see rotation?
3. Does rotation tell you what will happen?

CHAPTER 13

Stocks to Review

After you load sectors, the dashboard can make a short list called **Stocks to review**. Notice the words: *to review*. They are stocks worth a closer look, not stocks to buy.

Who gets on the list?

- A positive month, and not below the 50-day average.
- A strong sector, or one that is an early mover.
- Either a LONG setup from the rules, or doing better than its own sector.

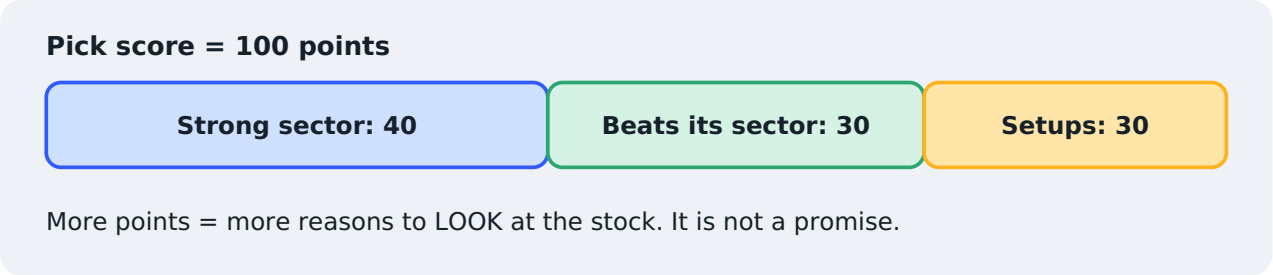

Figure 13.1: How the score out of 100 is built.

At most four stocks come from one sector, so the list is not all one kind of business.

Each row shows the **reasons** in plain words and **cautions** in orange, like 'up more than 25% in a month', 'mid or small cap: check liquidity and costs', or 'end-of-day price only'.

Try It! Send stocks to analysis

1. Load a few sectors.
2. Find **Stocks to review** under the rotation chart.
3. Tick the stocks you want to study.
4. Click **Send selected to Portfolio analysis**, then **Run analysis**.

Safety First

LONG setups come from the **last close**. The current price may have changed. Small and mid-size companies can be hard to sell quickly. Always check the full analysis first.

Check Your Understanding

1. What does 'to review' mean?
2. How many stocks can come from one sector?
3. What do the orange cautions tell you?

CHAPTER 14

Talk to the Assistant

The round chat bubble in the bottom right is the **Assistant**. It can look things up for you, like a helpful librarian.

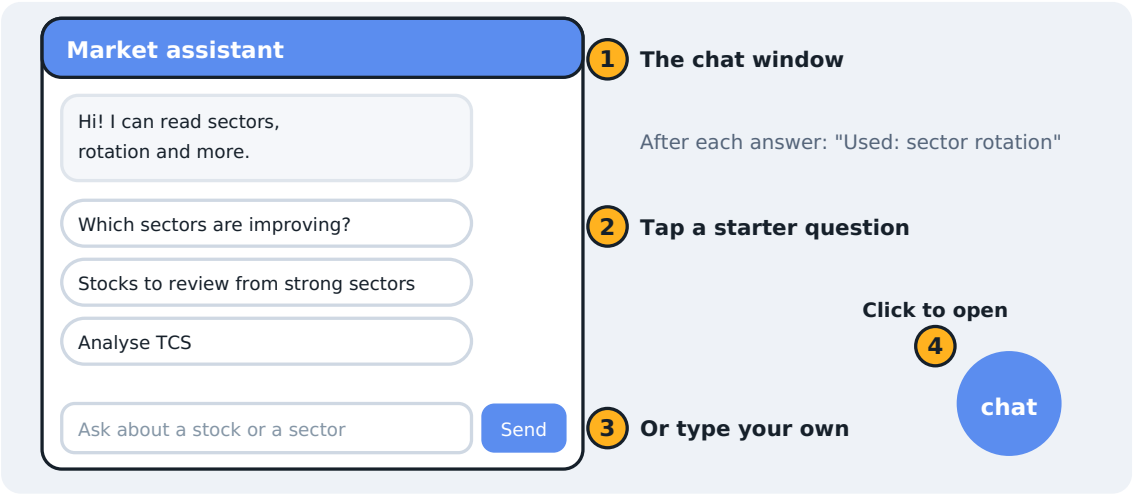

Figure 14.1: The chat window.

Ask this	What happens
Analyse TCS	Shows the price, averages and rule setups for TCS.
Which sectors are improving?	Reads the sector rotation data.
Stocks to review from strong sectors	Gives the shortlist with reasons and cautions.
How is Information Technology doing?	Reads that sector's momentum and stocks.
Backtest INFY	Runs the rules on old prices.
Show my evaluation list	Reads the list kept on your computer.

Let's Learn: The Used line

Under many answers you will see **Used: sector rotation** or similar. It tells you which data the Assistant looked at.

Before you chat

1. Ask the person who runs the dashboard to put an **Anthropic API key** in Settings. Without it the Assistant says it is unavailable.
2. For sector questions, open the Sectors tab and click **Load sectors** first.
3. Then click a starter question or type your own.

Safety First

The Assistant uses the dashboard's tools for every number, and it should say when something is only a rule's output. It does not give personal advice. If an answer sounds too sure, ask it to show the numbers.

Check Your Understanding

1. What does the 'Used' line tell you?
2. What must you do before asking about sectors?
3. What is needed for the Assistant to work at all?

CHAPTER 15

Settings and Your Own Lists

The **Settings** tab holds the dials and switches.

Panel	What it does
Anthropic API key	The key the Assistant needs. Only administrators see it. Never share it or put it in a website.
Funding rules	Your broker's leverage, interest and charges, used for net profit and loss. Saved to your account.
NSE connection	Tests that both data servers answer, and how fast.
Discover NSE tools	Lists everything the data servers offer, to see if a sector list is available.

Adding your own stocks to sectors

The sector lists are short on purpose. If a stock you care about is missing, you can add it. Make a file called **sector_map.json** (with an underscore) and put it in the app's data folder.

Figure 15.1: The Sectors tab shows the exact place on your computer.

Here is an example that adds Chennai Petroleum and Elecon:

```
{
  "Energy": { "Oil, Gas & Consumable Fuels": { "small": ["CHENNPETRO"] } },
  "Industrials": { "Capital Goods": { "small": ["ELECON"] } }
}
```

- Your file is **added to** the built-in lists. To use only your own, add `"_mode": "replace"`.
- Tiers are **large**, **mid** and **small**.
- Restart the server after editing. On a hosted site that has no saved disk, put the file in the project and upload it again.

Check Your Understanding

1. What is the file for your own sector stocks called?
2. Does your file replace the built-in list?
3. Who should keep the API key private?

CHAPTER 16

When Things Go Wrong

Even the best tools have bad days. Here is a helper chart.

What you see	What to try
Sector table is empty	Click **Load sectors**. The first load can take a long time. Try one sector.
A stock is missing from a sector	Check the line called **Not included**. Or add it in sector_map.json.
Prices show **EOD** instead of live	The live feed may be down, or the market is closed. Try again later.
Rotation says to load more sectors	Load at least three sectors.
Assistant says it is unavailable	Ask the administrator to check the API key and credit in Settings.
Assistant does not know sectors	Make sure the server has the latest files, then reload the page (Ctrl+F5).
Page still looks old	Press Ctrl+F5. Look for the build stamp at the top left.
NSE did not reply	The data servers can be slow. Wait a few minutes and use Settings, Test NSE connection.
Your Evaluation list is gone	Your browser may have cleared it. Use Open my file to load your saved copy.

Edgie the Owl says: When in doubt, take a breath, refresh the page, and try one small thing at a time.

Check Your Understanding

1. What should you press to refresh the page fully?
2. What do you do if the Evaluation list is gone?
3. Where do you look for stocks that could not load?

CHAPTER 17

Safety Rules for Smart Learners

You have learned a lot. Here are the rules that matter most.

1. **It is not advice.** The dashboard shows what simple rules say about past prices.
2. **Rules can be wrong.** Even a good-looking setup can fail.
3. **Check the price now.** A setup is made from last night's close.
4. **Small samples fool us.** A few wins do not prove a rule works.
5. **Be careful with borrowing.** MTF can make losses bigger.
6. **Mid and small companies can be hard to sell.** Check the costs.
7. **Never use money you cannot afford to lose.**
8. **Ask an adult or a SEBI-registered adviser** before making decisions.

Edgie the Owl says: Great job! You finished the book. Come back to any chapter when you need it.

What to do next

- Open the dashboard and run one analysis.
- Load one sector and find its industry groups.
- Ask the Assistant one question and look at the Used line.

Glossary

Word	Meaning
Average (moving average)	A smoothed price over the last number of days.
Backtest	Replaying rules on old prices.
Breadth	How many stocks in a group are doing well.
Close	The last price of the day.
Entry	The price to buy at in a setup.
EOD	End of day: using the closing price.
Industry group	A smaller group inside a sector.
LONG	A plan to buy and hope the price rises.
LTP	Last Traded Price.
MACD	A tool that senses whether prices are speeding up.
Momentum	How strongly prices have been moving.
MTF	Margin Trading Facility: the broker lends part of the money.
NSE	National Stock Exchange of India.
Resistance	A price ceiling where the price keeps stopping.
Reward : risk	The possible gain divided by the possible loss.
Rotation	Money moving from one sector to another.
RSI	A 0-to-100 meter of how fast the price rose or fell.
Sector	A group of companies in the same big business.
Setup	A plan with an entry, a stop and a target.
Stop loss	A safety line below the entry.
Support	A price floor where the price keeps stopping.
Target	The goal price above the entry.

Answer Key

Chapter 1

1. A button at the top that opens a different room of the dashboard.
2. The Sectors tab.
3. The round chat bubble in the bottom right corner.
4. Type >5 in the filter box under that column.

Chapter 2

1. The Last Traded Price: the newest price someone paid.
2. A floor.
3. The newest traded price with the previous close.

Chapter 3

1. To get out and keep a loss small if the price falls to the safety line.
2. The possible gain is twice the possible loss.
3. No. It is a day to check back.

Chapter 4

1. Run analysis.
2. The market is open and the price is fresh.
3. No. It is a normal answer.

Chapter 5

1. At least 3, and the first one (trend up) must pass.
2. Price dips to a floor, then climbs back and closes higher.
3. Price pushes up through a ceiling and closes above it.

Chapter 6

1. Gives every stock the same amount of money.
2. A facility where the broker lends part of the money, and you pay interest.
3. No. It is only an estimate.

Chapter 7

1. The 30 most-traded stocks.
2. They are saved on your Evaluation list as System picks.

Chapter 8

1. On your own computer, in your browser (and a file if you save one).
2. Checks real prices to see if each pick hit its target, its stop, or is still open.
3. A browser can clear its storage.

Chapter 9

1. Replays the rules on old prices to see what would have happened.
2. Luck can look like skill with only a few trades.

Chapter 10

1. A stock that went up the most today.
2. The source only refreshes about once a minute.

Chapter 11

1. A group of companies in the same big kind of business.
2. A month and a week up, index above its 20-day average, and at least half the stocks above their 50-day average.
3. Tick them, then click the send button.

Chapter 12

1. One that is still behind, but its relative strength is speeding up.

2. At least three.
3. No. It only shows what has been happening, and it often fails.

Chapter 13

1. Worth a closer look, not a recommendation to buy.
2. At most four.
3. Things to be careful about, like a stock being up a lot, or being small.

Chapter 14

1. Which data or tools the Assistant used for the answer.
2. Load sectors in the Sectors tab.
3. An Anthropic API key set in Settings.

Chapter 15

1. sector_map.json
2. No. It is added to the built-in list, unless you add _mode replace.
3. Everyone. It should not be shared or put in a website.

Chapter 16

1. Ctrl+F5.
2. Open your saved file with Open my file.
3. The line called Not included under the sector chart.
